

JLR ASSOCIATES

Powering Progress, One Panel at a Time!

ABOUT US

At **JLR ASSOCIATES**, we are dedicated to transforming the renewable energy landscape with state-of-the-art solar solutions. With over 11 years of expertise, we specialize in Engineering, Procurement and Commissioning (EPC) services, ensuring the seamless execution of solar projects from concept to completion. Our mission is to help businesses and home owners harness the limitless power of the sun, reducing electricity costs and contributing to a cleaner environment.

Solar Off/On Grid Systems

Our solar off-grid and on-grid systems are designed to provide uninterrupted power supply. Off-grid systems store excess energy in batteries, ensuring power even in remote areas. On-grid systems are connected to the utility grid, allowing you to save on electricity costs by feeding excess energy back into the grid. Ideal for residential, commercial and industrial applications.

Solar Fencing

Enhance security with solar fencing solutions that deliver an eco-friendly, low-maintenance alternative to traditional fencing. Powered by solar energy, these systems are cost-effective, durable and provide reliable protection for agricultural lands, residential properties and industrial sites.

Solar Water Heaters

Reduce energy consumption and utility bills with our solar water heaters. Using advanced solar thermal technology, our heaters efficiently convert sunlight into heat, providing an uninterrupted supply of hot water for homes, businesses and industries. Available in multiple capacities to suit your needs.

Solar Street Lights

Our solar street lights offer sustainable and cost-effective outdoor lighting solutions. Equipped with high-efficiency solar panels and LED technology, these lights provide bright illumination with minimal maintenance. Perfect for streets, highways, parking lots, gardens and public spaces.

PROJECTS

Achievements

Join the Solar Revolution!

Make the switch to solar and invest in a brighter, more sustainable future. At JLR ASSOCIATES, we don't just install solar systems—we create long-term energy solutions that redefine the way you power your world.
